View of installed plugin in plugin manager

Plugin configuration

If you were not redirected to the plugin configuration panel during installation, go to *WooCommerce → Settings → Payments*.

Select "Blue Media online payment system" to go to plugin configuration.

1. Basic plugin fields configuration

    -   "On/Off"

        Selecting the "On/Off" value determines whether payment channels will be visible in the order summary.

    -   "Title"

        Name of payment method supported by BlueMedia.

        The field value is displayed when selecting the payment method on the order page.

    -   "Description"

        Additional description of the gateway visible to the user, displayed after selecting the option of payment with BlueMedia

    -   "Blue Media online payment system domain"

        The field should be completed with a test or production URL of the payment gateway.

        Test address: *pay-accept.bm.pl*

        Production address: *pay.bm.pl*

        In case of choosing a test environment, the plugin will not process any actual payments.

    -   "Payment pending status"

        The payment pending status determines the manner of reserving the goods.

## 2. "Currency settings" section configuration

The plugin allows you to configure the store for the following currencies: *PLN, EUR, USD, GBP*

Fields common to all currencies:

- "ServiceID"

  Numerical value - unique store identifier.

- "Shared key"

  Unique key assigned to the given store.

The values of both fields are provided by BlueMedia.

- "Hash encryption method"

  Defines a shortcut function that is used to encrypt the transmitted data. The default function is SHA256. This function is set at the store configuration stage in the BlueMedia payment system.

- "Payments in background"

  Setting "Yes" means that the customer is not redirected to the Blue Media payment page but remains on the store page where the available payment channels are displayed.

  Setting "No" redirects the customer to the Blue Media payment page.

  With *"Background payments"* enabled, use the "Download / update channels" button - this will result in downloading the payment channels available to the store.

  There is also an option to sort the payment channels yourself - their order will be reflected in the order page.

Example of payment channels view with sorting enabled.

Fields available only for "PLN" currency:

- "BLIK PBL payment"

  Payment displayed as a separate item on the store website, with a redirection to the BLIK processor.

- "BLIK 0 payment"

  Payment displayed as a separate item on the store website.

  Selecting it displays a text field to enter the BLIK code.

- "Card payment"

  Card payment displayed as a separate item on the store page.

  When you select this option, you will be redirected to Blue Media, where you must provide the data required for card payment.

- "Installment Payment"

  Installment payment displayed as a separate item on the store page.

Example of payment selection view when ordering

Plugin logs

Plugin logs are available in *WooCommerce → Status → Logs*.

In the drop-down list in the top right corner of the page you will find files in "*bluemedia_payment_gateway-YYYY-MM-DD-hash.log*" format.

These files contain error logs that may occur during the payment process. The files also contain information about each payment made using the BlueMedia plugin.

This data can be useful when reporting problems with the plugin.

URL addresses configuration

In BlueMedia administrative panels https://oplacasie.bm.pl and https://oplacasie-accept.bm.pl make sure, that following fields contain the correct store addresses

- Return payment address configuration

  https://shop-domain.com/?wc-api=wc_payment_gateway_bluemedia &thank_you_page=1

- Configuration of the URL address to which ITN is sent

  https://shop-domain.com/?wc-api=wc_payment_gateway_bluemedia
